1 Problem [CSIR NET(JUNE-2017) MATHS-STATISTICS (Q-104)]

Let $\{X_n, n \ge 1\}$ be i.i.d. uniform (-1,2) random variables. Which of the following statements are true?

a)
$$\frac{1}{n} \sum_{i=1}^{n} X_i \to 0$$
 almost surely
b) $\left\{ \frac{1}{2n} \sum_{i=1}^{n} X_{2i} - \frac{1}{2n} \sum_{i=1}^{n} X_{2i-1} \right\} \to 0$ almost surely

- c) $\sup \{X_1, X_2, \ldots\} = 2$ almost surely
- d) inf $\{X_1, X_2, \ldots\} = -1$ almost surely

2 Solution

We using convergence in almost surely and Strong law of large number (SLLN)

1) Let $X_1, X_2, ...$ be an infinite sequence of random variables. We shall say that the sequence $\{X_i\}$ converges with probability 1 (or converges almost surely (a.s.)) to a random variable Y, if

$$P\left(\lim_{n\to\infty} X_n = Y\right) = 1\tag{2.0.1}$$

and we write,
$$X_n \stackrel{a.s.}{\to} Y$$
 (2.0.2)

2) Let X_n be i.i.d with $\mathbf{E}[|X_1|] < \infty$. Then, as $n \to \infty$, we have

$$\frac{S_n}{n} \stackrel{\text{a.s.}}{\to} \mathbf{E}[X_1] \implies \frac{S_n}{n} \stackrel{P}{\to} \mathbf{E}[X_1] \quad (2.0.3)$$

, where
$$S_n = X_1 + \dots + X_n$$
 (2.0.4)

also,

$$X_i \stackrel{a.s.}{\to} X \implies g(X_i) \stackrel{a.s.}{\to} g(X)$$
 (2.0.5)

a) $\frac{1}{n}(X_1 + \dots + X_n) \to E(X) \in (-1, 2) \quad (2.0.6)$ as $n \to \infty$, (2.0.7)

according to strong law of large numbers (SLLN).

So, option (A) is incorrect.

$$\left\{ \frac{1}{2n} \sum_{i=1}^{n} X_{2i} - \frac{1}{2n} \sum_{i=1}^{n} X_{2i-1} \right\} \stackrel{a.s.}{\to} \left\{ \frac{nX}{2n} - \frac{nX}{2n} \right\}$$

$$= 0$$

$$(2.0.8)$$

option (B) is correct.

c) using $X_i \stackrel{a.s.}{\to} X$ this, we also conclude that

$$\sup \{X_1, X_2, ...\} = 2 \text{ almost surely}$$
 (2.0.10)
$$\inf \{X_1, X_2, ...\} = -1 \text{ almost surely}$$
 (2.0.11)

Hence (B), (C) and (D) are correct option.
